

Packet Ship *Endeavour* Hospitality Platform

The Packet Ship *Endeavour* Hospitality Platform is an integrated set of software components enabling Systems Integrators and OEMs to create highly functional, cost-effective guest entertainment services for hotels, hospitals, ships and other vertical markets

- Software components for media solutions and services
- Standard Linux platform on commodity hardware
- Designed for systems integration
- Reduce time to market, lower risk
- Cost-effective pricing for OEMs, SIs and operators

The Endeavour platform comprises the following software components:

- *Guideline* User Interface
- *Streamline* Video Server
- *Timeline* IPTV Recorder
- *Gridline* Content Distribution
- *Centrelines* Asset Management

These components can be used individually or together, forming a complete solution for guest entertainment systems.

Each component is designed for integration with standard Linux platforms, with XML messaging to communicate with other parts of the solution

Architectural Overview
